This user guide is produced for our valued client –**Philsaga Mining Corporation**.

Being a customized and easy-to-navigate user guide, we are giving our admins (MCD and ICT) the chance to exercise their independence to improve monitoring and organizing information appropriate to their requirements. This document contains all the essential information for the user to fully utilize the features and functions of each module.

Property Accountability System v.2 (PAR v.2)

The Property Accountability System (PAR) is designed to streamline the process of tracking and managing accountable items within an organization, specifically in the context of Philsaga Mining Corporation. This system simplifies the assignment and monitoring of various items, ensuring that each item is associated with a specific individual who is responsible for it. The PAR system's user-friendly interface enhances the ease and clarity of this process, making it straightforward for users to identify and manage their accountabilities.

The **PAR v.2** system not only improves accountability and tracking within the corporation but also enhances operational efficiency and safety compliance through its seamless integration with PPE management (IRMS). This leads to better resource management, reduced administrative workload, and increased transparency in the handling of accountable items.

Sign-in Page

- It is the point of entry of the PMC **PAR v.2** user Portal. A user needs to provide the correct credentials to gain access to the Admin Portal.

Sign In
